The Formation of Stars and Planetary Systems, 2010, September 6-9, Särö, Sweden

Section & Talk by S. Cabrit

Name/Question... Ev Dishoeck

To what extent is the observed width of the
CO (SHV) outflow ^(profile) ~~along the cavity walls~~
representative of the velocity of the shock
to which the gas along the cavity walls
has been exposed?

↑ (corrected for inclination)

Could the profile be the result of multiple
successive shocks ~~events~~ in which the gas has
already been put in motion by a previous event?

Name/Answer.....
