

SPIRE Photometer Products and the Product Access Layer

Bernhard Schulz
and the SPIRE ICC

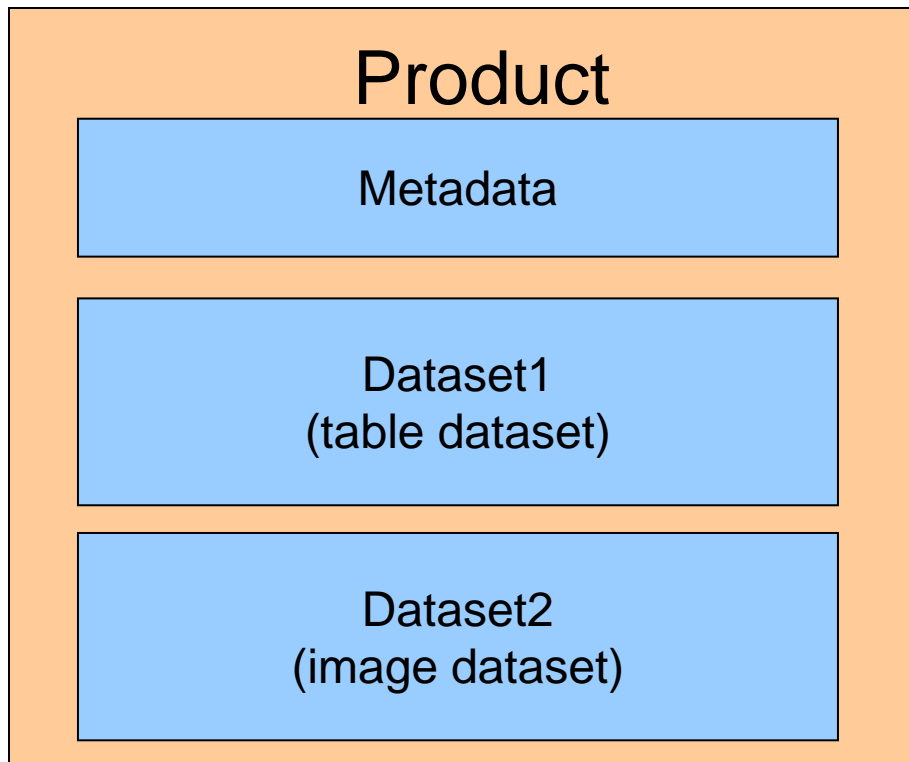

Additional Material

- Script to print Level 0.5 building blocks
- Script to demonstrate reducing disk space usage
 - Script reduces scan map and saves Level 1 in Level 1 only pool and saves maps only as FITS files
- Download from SPIRE_PHOT/SCRIPTS
 - SPIRE_PrintLevel05Blocks.py
 - SPIRE_ScanMapReductionL1poolVariant.py
- Video showing HIPE archive access
- Video showing importing and exporting HIPE data
 - Importing HSA export directory structure into HIPE and looking at a SPIRE scan map
 - Exporting data to an export directory structure
- Download from “SDP_DP_WS_Dec2009/VIDEOS/”
 - HipelImportExport.mov
 - HSAquery03.mov

General Product Structure

- Products are containers for datasets that can be stored within the HCSS system.
- A product can be exported to other software using a FITS representation.

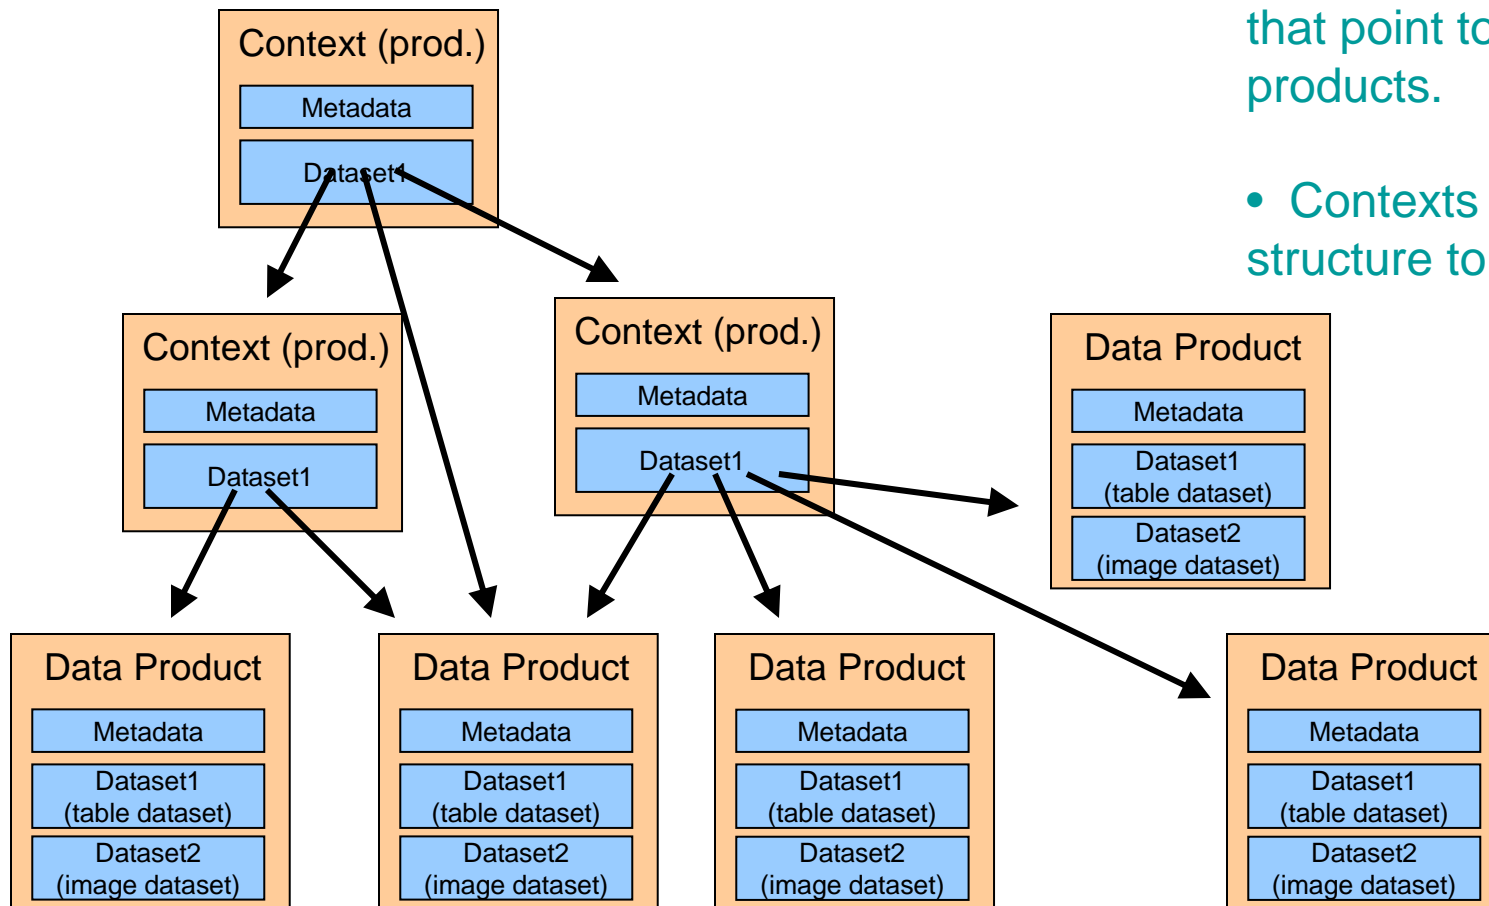

- Products contain:
 - Metadata,
 - Datasets
 - Processing history
- Types of datasets are:
 - Array dataset
 - Table dataset
 - Composite dataset
 - Spectrum1d
 - Spectrum2d
- Generic Product Types are:
 - SimpleImage
 - SimpleCube
 - SpectralSimpleCube
 - Context

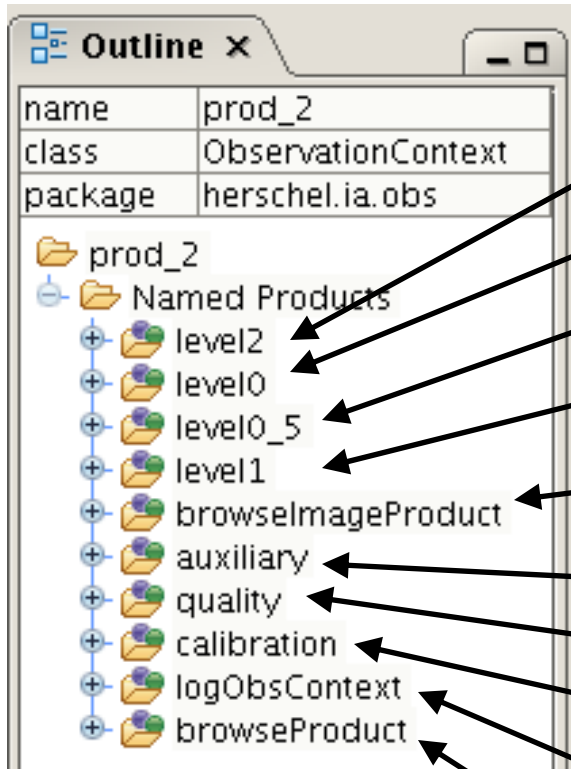

Contexts

- Contexts are products that point to other products.
- Contexts provide structure to the data.

A SPIRE Observation In HIPE

These are all contexts!

Level 2 Highest proc., images, PSF fit results

Level 0: Raw unprocessed reformatted data

Level 0.5: Data converted to engineering units

Level 1: Calibrated fluxes in timelines

Browse image product: Simple representation of final map

Auxiliary data: Pointing, orbit data, uplink info, etc...

Quality control data: Tells whether things went O.K.

Calibration data: Products used for processing

Reduction Log: Data reduction history

Browse product: Another browse product
